

Producing the aluminium needed today and tomorrow

Aluminium frames our homes and workplaces, packages our food and drinks, and is an ingredient in medical devices and smart phones, cars and planes, as well as solar panels and wind turbines.

The silver metal has been such a big part of our daily lives for so long we often overlook its presence. And its role in our decarbonised future is widely recognised.

For more than 60 years, Alcoa has operated an integrated aluminium production chain right here in Australia. Our track record of production and continuous improvement mean we're well placed to keep helping meet growing demand for this important metal.

Find out more about how we're producing the aluminium we need today and tomorrow by visiting www.alcoa.com/australia/en/hereforthefuture.
